

Abstract of the Disclosure

in order to alleviate the delay
required In an information processing unit with key controlled protection, ~~since it takes a long time~~
to fetch a storage key from key storage, an instruction and computation unit of CPU ^{first} receives ~~an~~ ^a ~~unverified~~
~~unchecked~~ data from a memory control unit of ^{the} CPU, ~~and then a transferred storage key is~~
~~checked.~~ When the storage key is subsequently received, the data
is verified.
